

## Protektin

- RASH PRURITIC AND PURULENT SKIN CONDITIONS
- MYCOSES, WARTS
- ECZEMA, URTICARIA, PSORIASIS, ACNE
- ALLERGIC SKIN REACTIONS
- TENDON AND LIGAMENT FLEXIBILITY
- GASTRIC DISORDERS, ABDOMINAL PAIN

**Protektin is a bioinformation regenerative cream with a balanced combination of herbs and high content of Podhájaska mineral spring water. The cream contains highly effective substances such as liposomes, AHAs, vitamins and peat extracts. Due to high amount of time-tested and fully natural substances it may have unique regenerative and cleansing effects on skin.**

**Bioinformation** comprises frequencies which simulate the control frequencies of subcortical brain structures, which regulate the autonomic nervous system and the function of viscera. Bioinformation acts to offset negative information and induce a reverse regenerative process.

### Energy effects of Protektin according to TCM principles

Protektin may harmonize energy meridians, mainly the liver, gallbladder, stomach, spleen and the governing vessel.

### Effects of Protektin

**Skin** Healing properties of Protektin may be used in particular to treat hepatic and biliary energy disbalance manifested as eczema, acne and all types of rash pruritic with typically ichthyotic appearance of the skin.

Extracts of field horsetail, common fumitory, herb Robert and common witch-hazel contained in Protektin may help treat eczema as they may inhibit itching. Extracts of greater burdock, common daisy, butter-and-eggs and heather may help treat acne. In long-term issues, i.e. psoriasis or acne in adults, it may be advisable to combine Protektin with the internal use of Regalen or King Kong as recommended by a therapist.

Protektin may be used to treat warts as it may have antiviral effects (some warts are caused by papillomaviruses) and it contains greater celandine. For successful removal of a wart, we recommend to treat the spot with Drags Imun first and use Protecting after drying. A complete solution represents a long-term task as these skin outgrowths may often have relatively deep roots.

Herbal complex of this cream may have significant antimycotic effects. Red, madescent and scaling skin often indicates presence of molds and Protektin may efficiently inhibit their development. Profuse feet sweating may be treated by Biothermal or Balneol baths followed by application of Protektin.

**Digestion** Protektin may be applied to the area of stomach and liver (right side below the ribs) when feeling full or in case of recurring belching. Protektin may be also suitable to treat irritated gallbladder or gallstones. Baikal skullcap, yellow spring bedstraw and common fumitory may provide for protection of the liver and gallbladder. However, it may be necessary to co-use Regalen in these cases.

**Allergies** Due to its composition of herbs with antiallergic effects (thanks to pansy, calamus, Japanese pagoda tree and common licorice root) and its ability to prevent allergens from penetrating the organism, Protektin may be used to treat urticaria, it may be very suitable as first aid in any insect bites or skin burns caused by stinging plants or aggressive herbal juices. Rash pruritic often accompanies allergic reactions of the organism to long-term accumulation of toxins and waste products, allergic reactions such as itching and eye watering point to hepatic disorders.

**Locomotor system** Protektin may help support tendon and ligament flexibility, it may be a very suitable supplement in long-term sport training and during athletic events. Its effects may increase tendon and ligament flexibility and minimize the probability of an injury.

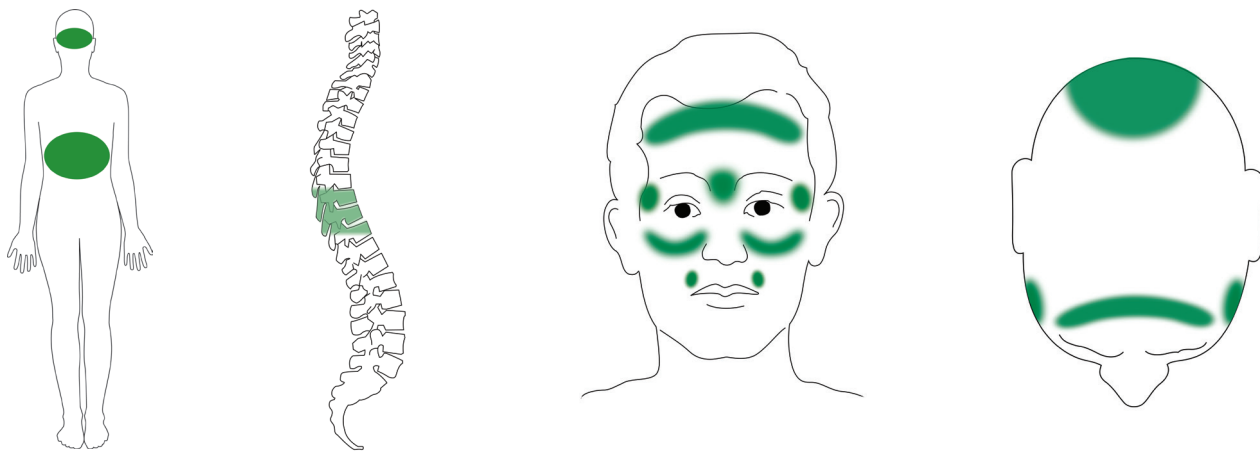

**Psyche** Protektin may support creativity and original thinking. It may be particularly suitable for students and others who strain their eyes, it may alleviate anger, impulsiveness, rage, irritability. It may be suitable for problematic individuals, during periods of mental disbalance and difficult life situations.

## Usage of Protektin

- Eczema, rash pruritic and purulent skin conditions, rashes, psoriasis, lichen planus, acne and impure skin
- Mycosis
- Inflamed and poorly healing wounds
- Supplement to treat vitiligo (loss of skin pigment)
- Allergic rashes (urticaria, insect bites)
- Warts and corns
- Gastric disorders, upper abdominal pain caused by hepatic, gallbladder, stomach, spleen and pancreas disorders
- Alleviation of flatulence (bloating), infantile colics
- Headache (application to temples), mental tension and stress
- Enhancement of the thyroid gland function
- Improvement of the vocal cords function in vocal fatigue – may be used as a prevention
- May improve tendon and ligament flexibility

Protektin cream may be combined with other Energy products.

## Main usage of Protektin

## Composition of Protektin

Butter-and-eggs, greater celandine, common kidney vetch, field horsetail, yellow spring bedstraw, wild pansy, common comfrey, greater burdock, calamus, common witch-hazel, herb Robert, common fumitory, Japanese pagoda tree, Baikal skullcap, galega, common daisy, common licorice root, heather, spikenard

Protektin also contains vegetable oils (evening primrose, linseed, castor, soy and peanut), essential oils (e.g. lavender, geranium, tea tree, ginger), vitamins A and E, lecithin, Peru balsam, Podhájska mineral spring water, potassium humate, snail egg extract (helixin) and California earthworm extract (vermesin), bioinformation from minerals and other natural substances.

## Regenerative process and application method

Protektin is easy to spread and is water soluble. A thin layer is applied locally to affected areas 1–3 times a day. The cream can be applied topically to areas corresponding to the internal locations of different organs, to reflexology zones or acupuncture points for both acute problems and for chronic diseases or feelings of discomfort. The cream can be applied through massage or directly to affected areas.

A temporary deterioration of the condition signifies that a reverse regenerative process, also known as a reverse reaction, is taking place. This phenomenon is positive and can be influenced by decreasing application frequency and increasing fluid intake. In these types of cases, we recommend discussing the issue with your consultant or therapist.

**Storage:** Store in a dry place, out of direct sunlight, between 10°C and 25°C. Protect from frost.
